

U.S. Median Income Compared to Land Area, by State (2011). In blue, the area of each state has been made proportional to its median income (MI). Each state's actual area is shown in yellow. Therefore, for example, the District of Columbia's median income is higher than California's,

even though the District of Columbia has a much smaller geographical area than California. *Conclusion:* Median income is more concentrated in the District of Columbia than in California.
